

# In Game UI

Olusola Olaoye

*On the unity asset store*

## Introduction

In-Game UI is a package that contains high quality 2D graphics for different game genres. The icons can be used for racing games, arcade fighting games, shooter games and more.

## Set-up and Usage

Use the demo scenes for guidance. Whenever you need any new UI object from this package, simply create one by right-clicking on the hierarchy, navigating to the **In Game UI** option and selecting the UI object of your choice. You can also click on the "Game object" menu option and under the **In Game UI** option, select the UI object of your choice.
